

Root Cause Analysis

- There may be new features added
- Some old issues may have been fixed

Retest new and old features

- Cross browser visual UI website works and displays properly on all browsers.
- Save and cancel buttons save and cancel changes.
- ID (Whole, positive, and unique number)
- Name (1-30 characters long)
- Phone (10 digits in length)
- Title (1-30 characters long)
- All fields except for ID are editable.

The screenshot shows the 'Employee Manager' application. On the left is a list of employee names: Bernice Ortiz, Marnie Barnett, Phillip Weaver, Teresa Osborne, Dollie Berry, Harriett Williamson, Ruby Estrada, Lou White, Eve Sparks, Lois Brewer, and New Employee. On the right is a 'New Employee' form with fields for Name (containing 'New Employee'), Phone Number (containing '1234567890'), and Title (containing 'New Employee'). Below the form is a red error message: 'The phone number'. At the bottom of the application window, it says 'Version 1.2'.

New employee columns are cut off on Firefox.

This screenshot shows a portion of the 'New Employee' form. The text 'New Employee' is repeated multiple times, but the right side of the text is cut off, leaving only the first few characters visible in each line.

Visually better UI on Edge but still same cut off issue.

Old features are still working.
A negative integer has been fixed.

Added Features

All fields will be required for any entry/modification
Add Employee function

Future Functionality

- Phone numbers will be validated 10 digit, area code included, US phone numbers. e.g. (123)456-7890
- The Employee List will reside in a database and be accessed through API integration
- A search function to filter the employee list will be available, based on Job Title, Name, and/or ID
- An Email Address field will be added for each employee file

Items you would like to see as a user for Employee Manager.

1. Notes on design/user flow

User flow is not up to par and needs work. There is a screen cutoff and employees seem to be blocked by a footer.

2. What features are listed to be added in the docs?

- Phone numbers will be validated 10 digit, area code included, US phone numbers. e.g. (123)456-7890
- The Employee List will reside in a database and be accessed through API integration
- A search function to filter the employee list will be available, based on Job Title, Name, and/or ID
- An Email Address field will be added for each employee file

3. How do you want to see these features implemented?

Email address implemented under the name field.

Search function display in top right corner of the header.

Some of the issues brought up by the customer in a previous lab were not fully addressed, list out some possible reasons that these issues were not addressed.

More polished UI has not been addressed because devs are still working on new features. A login and out feature has been missed in the documentation.

Take the next 30 minutes and write out an update to that customer.

The Employee Manager site is still being worked on and is under construction. The UI styling issues are low severity problems that will be fixed last because they are not crucial to functionality. New Features have been added, and some features have yet to be added. I am working closely with the dev team to make sure parts are added and bugs are fixed to get everything you want.

write up a report as if it were being sent to a QA manager giving them updates on all the work you've done so far for the Employee Manager.

Employee Manager is making progress, and new and old features have been documented and tested. UI issues have been noted, and the dev team has shown bug reports and screenshots.
